OnShape | Do this in class | About 20 min

Getting Started with OnShape

OnShape is the 3D design tool real engineers use. It runs right in your Chromebook's browser, no download needed!

DO THIS IN CLASS, WITH YOUR TEACHER

Make your account **in class**, while your teacher is watching. If you're under 13, OnShape needs a grown-up (your teacher) to say it's OK, so **don't sign up at home on your own**.

1 Make your account

- ☐ Go to **onshape.com/education** and click **Sign up** (it's free for students).
- ☐ Choose **Student**, then fill in the form with your **school email** and your school's name. Ask your teacher if you're not sure what to put.
- ☐ Open your school email. Find the email from **OnShape** and click the link inside to **activate** your account. No email after 5 minutes? Check your spam folder, then tell your teacher.
- ☐ Make a password. Use one you'll remember, and **never** share it with anyone (except a grown-up at home).

2 Sign in

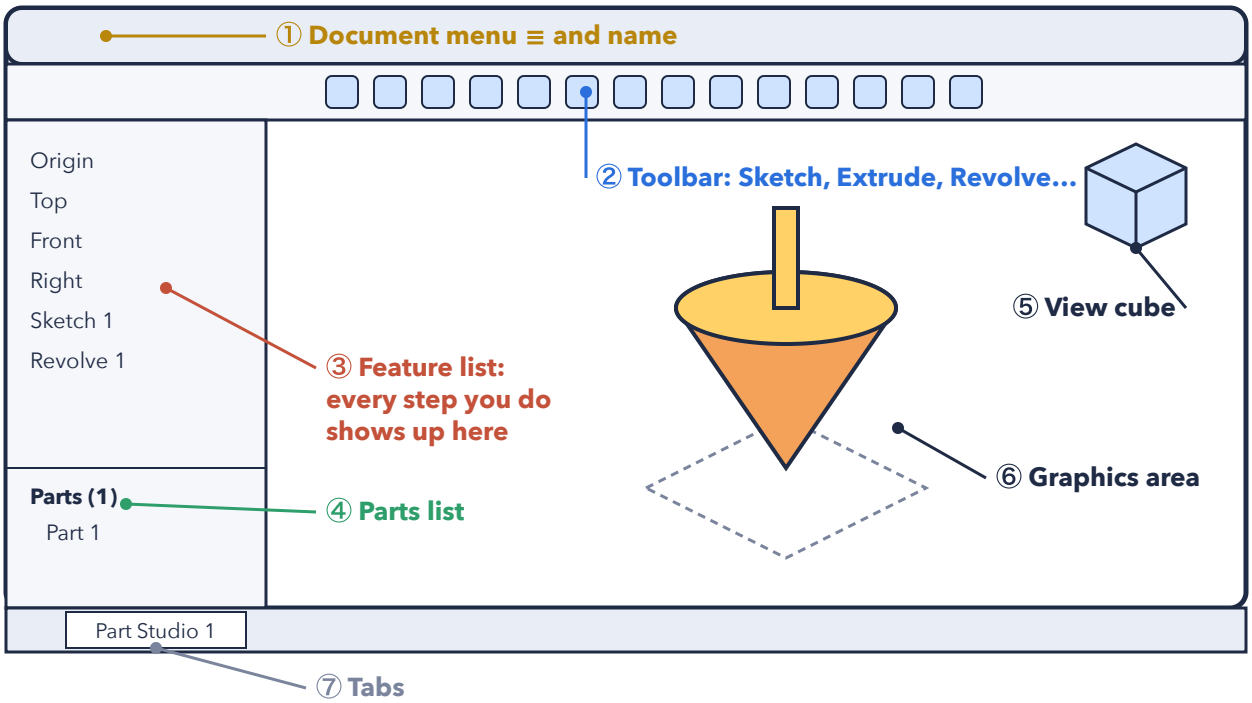

- ☐ Go to **cad.onshape.com** and sign in with your school email and password.
- ☐ Bookmark it! Press `Ctrl` + `D` so you can find it fast next time.

TEACHER NOTES

Students under 13 need a qualified adult (school, teacher or parent) to create or authorize the account. Per OnShape, a school or educator can consent on parents' behalf for school use, following district policy. There's no bulk sign-up on the free Education plan, so each student signs up separately. If activation emails don't arrive, ask IT to allow email from onshape.com.

A tour of the screen

Click **Create → Document** (top left), name it **Practice – First Name Last Initial**, and click **Create**. Here's what you'll see:

①	**Document menu** (≡) and name: click the name to rename your document.
②	**Toolbar**: the tools that make shapes. Hover over any button to see its name.
③	**Feature list**: every step you do is saved here, in order. Right-click a step and choose **Edit** to change it later. Super handy!
④	**Parts list**: the finished parts you made.
⑤	**View cube**: click a side (like **Top** or **Front**) to look from that side.
⑥	**Graphics area**: where your design shows up.
⑦	**Tabs**: you'll work in **Part Studio 1**.

One-time setup: millimeters

- [ ] Click the **Document menu** (≡) → **Workspace units**. Set **Length** to **Millimeter** and click **OK**. Do this in **every new document**, so 20 means 20 mm, not 20 inches!

🖱️ Moving around on a Chromebook

🔄	**Spin the view:** press down on the touchpad with **two fingers** and drag. Or click the arrows around the view cube.
🔍	**Zoom:** slide **two fingers** up or down on the touchpad (without pressing).
🎯	**Lost?** Press `F` to zoom to fit. Your whole design jumps back into view.
📐	**Look straight at something:** click **Top**, **Front** or **Right** on the view cube.
↩️	**Undo:** `Ctrl` + `Z`, just like in TinkerCad.
⏲️	**Stuck in a tool?** Press `Esc` to stop.

📤 How to hand in your work

OnShape saves everything by itself, all the time. To hand in a project, you **share** it with your teacher:

- ☐ Make sure your document is named **Project – First Name Last Initial** (like **Top – Maya R**).
- ☐ Click **Share** (top right).
- ☐ Type your teacher's email: `iggyzs@yahoo.com`
- ☐ Choose **Can view**, and turn on **Export** (so your teacher can download it to print). Click **Share**.

YOU'RE READY!
Next up: the **Spinning Top**. If you finish early, try the **Box with a Lid** challenge.

HOW IS ONSHAPE DIFFERENT FROM TINKERCAD?
In TinkerCad you stack ready-made shapes. In OnShape you **draw a flat sketch** first, then turn it into 3D (by pulling it up, or spinning it around). It's how real products get designed!
